The cost of disconnected finances

What's slowing down Canadian construction firms—and how to fix it

MNP DIGITAL

Paper trails & patchwork tools slow everything down

Construction companies often rely on disconnected spreadsheets, legacy systems, and paper-based workflows. This lack of integration makes it impossible to get a clear view of finances or operations in real time—especially as job sites get farther North and entities start to multiply.

When data doesn't flow, neither do decisions

Without centralized visibility, financial consolidation becomes a painstakingly manual task. Deadlines get pushed, forecasting gets fuzzy, and decision makers are flying blind—just as the seasonal slowdowns start squeezing cash flow.

Manual processes multiply with every new project or acquisition

Adding new job sites, subcontractors, or even entire entities introduces complexity fast. Every acquisition becomes a bespoke integration project, and with no centralized system to onboard or manage them, your finance team becomes the bottleneck.

Inefficiency spreads from finance to the field

Outdated tools can't keep up with evolving labour laws, regional tax rules, or project changes on across job sites. Manual scheduling, bid tracking, and payroll processes cause miscommunication, rework, and compliance risks—driving up costs just as skilled labour shortages push wages higher.

Scaling means adding people, not improving processes

Eventually, the only way to keep up is to throw more people at the problem. But hiring more finance staff doesn't fix inefficient systems. And while costs go up, delays, errors, and cost overruns become the norm—not the exception.

5 SIMPLE STEPS

Sage Intacct a **leader in construction accounting software**. When implemented with MNP Digital, **one of Canada's largest national accounting, tax, and business consulting firms**, Canadian construction companies get industry-specific solutions, seamless integration, and long-term value—from financial planning to project execution, and everything in between. Here's how we do it.

01

Prep the groundwork for change

Successful Sage Intacct modernizations start with internal alignment. MNP Digital works with you to surface pain points, map current processes, and build buy-in from key decision makers. This sets the stage for a smoother ERP implementation and ensures everyone's on the same page from the start.

02

Build a roadmap that works

MNP Digital helps you create a roadmap tailored to construction's realities—remote sites, seasonal shifts, and provincial compliance. From planning your cloud transition to automating cost tracking, you'll get more from Sage Intacct by correctly aligning it to your unique business needs from the start.

03

Connect the field & finance

MNP Digital ensures Sage Intacct integrates with your full construction stack—Procore, Autodesk, estimating tools, and more. That means labour data, equipment usage, and project updates flow seamlessly from job site to finance (and back), without duplicate entry or disconnected systems.

04

Roll it out with crews in mind

Your ERP shouldn't just work for accounting—it should work for your field teams too. MNP Digital leads the implementation of Sage Intacct with practical training, change management, and field-tested workflows that support adoption from head office to job site.

05

Keep on building

MNP Digital gets you the most from your Sage Intacct implementation long after it goes live. With real-time dashboards and performance insights, you'll reduce financial risk, improve forecasting, and continuously adapt the system to meet your evolving business needs.
