From blueprint to bottom line

4 ERP benefits

making a difference for Canadian construction companies

Across Canada, construction companies are adopting smarter, more capable finance systems to stay ahead of growing complexity and cost pressures—no matter their size. Cloud-based ERP solutions such as Sage Intacct deliver scalable, configurable tools tailored to the unique workflows of the Canadian construction industry, helping you meet today's demands and adapt to tomorrows. Whether you're preparing for growth, connecting teams, or controlling costs, MNP Digital provides the planning, implementation, and ongoing support to help you realize the full benefits of Sage Intacct.

MNP DIGITAL

Better decision making with real-time data from a single source of truth

>50%

revenue growth and net margins for companies operating with real-time data

MIT Center for Information Systems Research →

Without real-time data, finance teams are stuck waiting for or relying on outdated information. Either way, decisions are delayed, reporting errors add up, and misalignment across projects hurt revenue.

Sage Intacct centralizes your data to ensure teams always work from the same, single source of truth. With live insights into budgets, costs, and project changes, decision makers can act immediately—not after the numbers come in—speeding up reporting, reducing manual changes, and improving project profitability.

92%

of organizations using modern planning tools have realized one or more positive business outcomes, including improved agility, alignment, and insight.

Harvard Business Review →

Secure access, anywhere and anytime, for improved data mobility and scalability

Disconnected systems and location-dependent access make it difficult to manage multiple entities, support remote teams, or scale operations efficiently across offices, job sites, and provinces.

With cloud-based ERP from Sage Intacct, teams can access consolidated data securely without the need for expensive VPNs or physical server maintenance. Whether managing multiple entities or scaling to new markets, you'll stay connected and in control with a unified financial framework that doesn't depend on higher headcounts.

90% of descriptive and diagnostic analytics in finance will be fully automated by 2027

Gartner →

Efficiency and cost-savings through automation and increased product capabilities

Manual processes slow down construction finance teams, introduce human error, and pull valuable resources away from strategic initiatives such as forecasting, budgeting, and project optimization.

Sage Intacct automates essential financial processes such as billing, payroll, and intercompany transactions, reducing manual work and human error. Real-time dashboards and automated reporting help finance teams proactively track deadlines, validate data entry, and enforce compliance rules—allowing for faster time-to-close and the ability to adjust budgets, identify risks early, and stay financially aligned.

Proven strategies and ongoing support for long-term success

Without a strategic plan and expert support, ERP projects can stall during implementation, leading to poor adoption, disconnected teams, and unrealized business value.

With the right partner, your ERP becomes a strategic advantage. MNP Digital ensures Sage Intacct is implemented with clear goals, aligned teams, and construction-specific workflows that suit your business. You get stronger user engagement, unlock performance insights for continuous improvement, and simplify future integrations and enhancements to maximize the long-term value of your ERP investment.

70% of digital transformations fail—often due to poor planning, lack of change management, and limited user adoption.
