

# QR IDENTIFICATION TAGS

## USE AND INSTALLATION

Standard QR Equipment Identification Tag (part #100563)

Custom QR Equipment Identification Tag (part #101100)

At Fluid life, our goal is to set you on the path to reliability with sustainable solutions that make sample extraction as easy and effective as possible. We offer a complete range of collection devices that help pinpoint and solve problems, which includes our QR Identification Tags. This extremely useful metal tag is used for spot identification of oil sampling points and component task locations. When installed properly, QR Tags can easily be read by your mobile phone with the myLab phone app or using a barcode/QR scanner with the myLab web application.

### INSTALLATION GUIDELINES

Although QR Tags are very durable and should provide years of service, there are a few things to remember when installing and using these Tags. The following guidelines will help to ensure that your QR Tags will be readable for years to come.

- Install as close as possible to the sample point or component task location.
- Use a plastic strap or fine wire to attach the tag in place, making sure it is fully visible to allow for scanning.
- Using a fitting or bolting through the hole of the tag is also suitable.
- Although durable, try to keep the tags clean and damage free.
- Can be glued to a metal surface with any adhesive.

### STREAMLINE SAMPLE SET UP

The QR Identification Tags, along with the QR Sample Jars, can be used to streamline sample registration within the myLab Mobile App. Simply scan the Tag with your mobile device when entering equipment information, then scan the Jar to associate the sample to the equipment tag.

### TAG TYPES

QR Equipment Identification Tags are available in two versions:

- The standard QR Equipment Tag (part #100563) is 1" x 3" and includes the QR code only. To associate a Tag to your equipment or component simply scan the Tag with your mobile device when entering equipment information, then scan the sample jar to associate the sample to the equipment Tag. You can purchase these tags online in our Fluid Life Shop.
- The Custom Equipment Tag (part #101100) is 2" x 2". The additional information on these tags offers the ability to see the Oil Type, and sample location information quickly and easily. Each tag is custom encoded with specific details such as Unit ID, Component ID, oil types or greasing tasks. As these tags are custom to your equipment, contact your Account Manager for pricing. If desired, Fluid Life can come to your site and install the tags (a quote can be provided for this service).

### WHY FLUID LIFE

We're a company that's All Ways Reliable. Fluid life strives to set you on the path to reliability with sustainable solutions that make sample extraction as easy and effective as possible. Our selection of premium sample ports, valves, fittings, and pumps are engineered for your longterm success. Whatever your challenge, we have a solution that's right for you.
